a) Check Subsequence with $\text{gcd} = 1$

b) Delete 1 element such that gcd of
remaining elements in your array
is max

GCD: greatest common divisor / HCF \rightarrow highest common factor

$$\gcd(a, b) = n \quad \{ n \text{ is greatest number } \underline{a \% n = 0} = \underline{b \% n = 0} \}$$

$$\begin{array}{l} \gcd(15, 25) : 5 \\ \downarrow \quad \downarrow \\ 1 \quad 1 \\ 3 \quad 5 \\ 5 \quad 25 \\ 15 \end{array} \quad \begin{array}{l} \gcd(12, 30) : 6 \\ \downarrow \quad \downarrow \\ 1 \quad 1 \quad 15 \\ 2 \quad 2 \quad 30 \\ 3 \quad 3 \\ 4 \quad 5 \\ 6 \quad 6 \\ 12 \quad 10 \end{array} \quad \begin{array}{l} \gcd(10, -25) : 5 \\ \downarrow \quad \downarrow \\ 1 \quad -25 \\ 2 \quad -5 \\ 5 \quad -1 \\ 10 \quad 5 \\ 25 \end{array}$$

$$\begin{array}{l} \gcd(0, 8) : 8 \\ \downarrow \quad \downarrow \\ 1 \quad 1 \\ 2 \quad 2 \\ 3 \quad 4 \\ 4 \quad : \\ \vdots \quad 8 \\ 8 \\ \vdots \\ \infty \end{array} \quad \begin{array}{l} \gcd(0, -10) : 10 \\ \downarrow \quad \downarrow \\ 1 \quad 1 \\ 2 \quad 2 \\ \vdots \quad 5 \\ 10 \quad 10 \\ \vdots \\ \infty \end{array} \quad \begin{array}{l} \gcd(-16, -24) : 8 \\ -ve \quad -ve \\ 1 \quad 1 \\ 2 \quad 2 \\ 4 \quad 3 \\ 8 \quad 4 \\ 16 \quad 6 \\ 8 \quad 12 \\ 24 \end{array}$$

$$\gcd(-2, -3)$$

$$\begin{array}{l} 1 \quad 1 \\ 2 \quad 3 \end{array}$$

$$\gcd(0, 0) : \underline{\text{not defined}}$$

$$\begin{array}{l} 1 \quad 1 \\ 2 \quad 2 \\ 3 \quad 3 \\ \vdots \quad \vdots \\ \infty \quad \infty \end{array}$$

↳ If at all, they ever give this input, they will specify what to return

Note: $n \% 0 \rightarrow \{ \text{not defined} \}$
 $0 \% n = 0 \quad \{ \text{defined} \}$

Properties of gcd(a, b):

- $\gcd(a, b) = \gcd(b, a)$ // commutative property
 $|n| = \text{abs of } n$
 - $\gcd(a, b) = \gcd(|a|, |b|)$, // sign of number not matter
 - $\gcd(0, n) = |n|$, if $n \neq 0$ // $\gcd(0, -10) = 10$,
 - $\gcd(a, b, c) = \gcd(\gcd(a, b), c)$
= $\gcd(\gcd(a, c), b)$
= $\gcd(\gcd(b, c), a)$
- associative property

Special Property: $[A, B > 0 \text{ eq } A >= B \text{ eq } \gcd(A, B) = n]$

Ass: $\gcd(A, B) = n$: n is greatest number $A \% n = 0, B \% n = 0$

$$\underline{\underline{\gcd(A - B, B)}} = n$$

If

$$\begin{cases} (A - B) \% n = 0 & \text{eq} \\ \text{// satisfied} \end{cases}$$
$$\begin{cases} B \% n = 0 \\ \text{// satisfied, given} \end{cases}$$
$$\begin{aligned} &= [A \% n - B \% n + n] \% n \\ &= [0 - 0 + n] \% n \\ &= \underline{\underline{n \% n = 0}} \end{aligned}$$

Claim: If $A, B > 0$ eq $A >= B$

$$\boxed{\gcd(A, B) = \gcd(A - B, B)}$$

$$\gcd(23, 5) = \boxed{\begin{matrix} a & b \\ 23 & 5 \end{matrix}} = \boxed{\begin{matrix} a & b \\ 23 - 5 & 5 \end{matrix}} = \boxed{\begin{matrix} a & b \\ 18 & 5 \end{matrix}} = \boxed{\begin{matrix} a & b \\ 23 - 5^2 & 5 \end{matrix}} = \boxed{\begin{matrix} a & b \\ 13 & 5 \end{matrix}} = \boxed{\begin{matrix} a & b \\ 23 - 5^3 & 5 \end{matrix}} = \boxed{\begin{matrix} a & b \\ 8 & 5 \end{matrix}} = \boxed{\begin{matrix} a & b \\ 23 - 5^4 & 5 \end{matrix}} = \boxed{\begin{matrix} a & b \\ 3 & 5 \end{matrix}}$$

$$\gcd(23, 5) = \gcd(3, 5) = \gcd(23 \% 5, 5)$$

$$A \% B = A - \text{greatest mul of } B \quad a = A$$

$$A >= B > 0$$

$$\gcd(A, B) \longrightarrow \gcd(A - B, B) \text{ // say } A - B > B$$

:

$$\gcd(A, B) \longrightarrow \boxed{\begin{matrix} a & b \\ A - 2B & B \end{matrix}} \text{ // say } A - 2B > B$$

:

$$\gcd(A, B) \longrightarrow \boxed{\begin{matrix} a & b \\ A - 3B & B \end{matrix}} \text{ // say } A - 3B > B$$

:

$$\gcd(A, B) \longrightarrow \boxed{\begin{matrix} a & b \\ A - 4B & B \end{matrix}} \text{ // say } A - 4B > B$$

:

:

$$\gcd(\boxed{A - yB}, B) \text{ // say } A - yB > B$$

// yB is greatest multiple of B which
we can subtract from A

$$\gcd(A, B) \longrightarrow \downarrow \gcd(A \% B, B)$$

// Given $A >= B \& B > 0$

$$\boxed{\gcd(A, B) = \gcd(A \% B, B)}$$

$$\begin{aligned} \gcd(24, 16) &= \boxed{\begin{matrix} a & b \\ 24 & 16 \end{matrix}} = \boxed{\begin{matrix} a & b \\ 8 & 16 \end{matrix}} = \boxed{\begin{matrix} a \% b & b \\ 8 & 16 \end{matrix}} \xrightarrow{x} \\ &= \boxed{\begin{matrix} a & b \\ 8 & 8 \end{matrix}} = \boxed{\begin{matrix} a & b \\ 0 & 8 \end{matrix}} \end{aligned}$$

$\boxed{\gcd(A, B) = \gcd(B, A \% B)}$ It will always work $a > b \text{ || } b > a$

$$\gcd(24, 16) = \gcd(16, 8) = \gcd(8, 0) = \underline{\underline{\text{ans} = 8}}$$

$$\begin{aligned} \gcd(14, 21) &= \gcd(21, 14) = \gcd(14, 7) = \gcd(7, 0) = \underline{\underline{\text{ans} = 7}} \\ a < b &\xrightarrow[\text{flipped}]{\text{data}} a > b \end{aligned}$$

$$\gcd(0, 8) = \gcd(8, 0) = \underline{\underline{\text{ans} = 8}}$$

$$\begin{aligned} \gcd(23, 5) &= \gcd(5, 3) = \gcd(3, 2) = \gcd(2, 1) = \gcd(1, 0) \\ &= \underline{\underline{\text{ans} = 1}} \end{aligned}$$

int gcd(a, b) { TC: O $\left[\log_2^{\text{max}(a, b)}\right]$

 if(b == 0) { return a; }
 return gcd(b, a % b);

Note: according to our function $\underline{\underline{\gcd(0, 0) = 0}}$
We need to return according to Question

} main() {

 gcd(|a|, |b|) // Before applying gcd take absolute

Say $a < b \rightarrow$

$$\begin{array}{ccc} a & b & a & b & b & a \% b \\ \gcd(14, 21) & = \gcd(21, 14) & = \gcd(14, 7) & = \dots \dots \end{array}$$

$$\gcd(-10, -15) = \gcd(|10|, |15|) =$$

Say: 10:35

Q) Given $\text{ar}[n]$ calculate gcd of entire array

$$\text{ar}[3] = \{6, 12, 15\} :$$

$$\text{ans} = \begin{matrix} & 6 & 12 & 15 \\ & \swarrow & \searrow & \downarrow \\ 6 & & 6 & 3 \end{matrix} : \text{ans} = 3$$

$$\text{ar}[4] = \{8, 16, 12, 10\} :$$

$$\text{ans} = \begin{matrix} & 8 & 16 & 12 & 10 \\ & \swarrow & \searrow & \downarrow & \downarrow \\ 8 & & 8 & 4 & 2 \end{matrix} : \text{ans} = 2$$

int gcdarr (int ar[], int n) {
TC: $(n-1) * \log_2 \text{man of array}$

$$\text{ans} = \text{ar}[0]$$

$$i = 1; i < n; i++ \{$$

$$\text{ans} = \gcd(\text{ans}, \text{ar}[i])$$

3
return ans;

$$TC \Rightarrow O\left(N \log_2 \text{man of array}\right)$$

Dry run: $\text{ar}[4] = \begin{matrix} 0 & 1 & 2 & 3 \\ 8 & 16 & 12 & 10 \end{matrix}$

$$\text{ans} = \text{ar}[0] = 8$$

1 $\text{ans} = \gcd(\text{ans}, \underline{\text{ar}[1]})$

1 $\text{ans} = \gcd(8, \text{ar}[1]) = \gcd(8, 16) = 8$

2 $\text{ans} = \gcd(8, \text{ar}[2]) = \gcd(8, 12) = 4$

3 $\text{ans} = \gcd(4, \text{ar}[3]) = \gcd(4, 10) = 2$

4 return ans = 2

Q8) Given an array, check if there exists a subsequence
 ↳ boolean with $\text{gcd} = 1$

$\text{arr}[5] = \{4, 6, 8, 8\}$: sub-seq: $\{4, 8\}$: return True

$\text{arr}[5] = \{16, 10, 6, 15, 27\}$: sub-seq: $\{16, 6, 15\}$: return True

$\text{arr}[4] = \{6, 12, 3, 18\}$: no sub-seq : return False

Idea: Generate all subseq & calculate gcd for each of them

$$\text{TC: } 2^n * \{n \log_{\frac{1}{2}}^{\text{max}}\} \rightarrow 2^n * n \log_2^{\text{max}}$$

Idea: Say 8 elements A B C D E F G H

↳ given subsequence B, D, F, G $\text{gcd}(B, D, F, G) = 1$

↳ gcd of entire arr[] = $\text{gcd}(A, B, C, D, E, F, G, H)$

$$\text{gcd}(\underbrace{\text{gcd}(B, D, F, G)}_{\text{gcd}(B, D, F, G)}, \text{gcd}(A, C, E, H))$$

$$\text{gcd}(1, \text{gcd}(A, C, E, H)) = 1$$

Claim: If there exist a sub-seq with $\text{gcd} = 1$

$$\Rightarrow \text{gcd of entire array} = 1$$

→ Find:

→ gcd of entire arr[] = 1 : Subseq Then, return True

→ gcd of entire arr[] ≠ 1 : No subsequence with $\text{gcd} = 1$

$\text{TC: } O(N \log_2^{\text{max}})$ ↳ max of arr[] return False

Delete one:

Given $ar[N]$ elements, we have to delete 1 element, such that gcd of remaining array elements is max \hookrightarrow find max gcd?

Eqn:

$$\begin{matrix} * \\ 0 \end{matrix} \quad \boxed{1 \quad 2 \quad 3 \quad 4} \quad \text{gcd of rem elements}$$

$$\begin{matrix} 24 \\ = \end{matrix} \quad 16 \quad 18 \quad 80 \quad 15 = 1 \quad \left. \right\} \quad \underline{\text{final ans=3}}$$

$$\begin{bmatrix} 0 \\ 24 \end{bmatrix} \quad \begin{matrix} * \\ 1 \end{matrix} \quad \begin{bmatrix} 2 \quad 3 \quad 4 \\ 18 \quad 80 \quad 15 \end{bmatrix} = 3 \quad \left. \right\}$$

$$\begin{bmatrix} 0 \quad 1 \\ 24 \quad 16 \end{bmatrix} \quad \begin{matrix} 2 \\ 18 \end{matrix} \quad \begin{bmatrix} 3 \quad 4 \\ 80 \quad 15 \end{bmatrix} = 1$$

$$\begin{bmatrix} 0 \quad 1 \quad 2 \\ 24 \quad 16 \quad 18 \end{bmatrix} \quad \begin{matrix} 3 \\ 80 \end{matrix} \quad \begin{bmatrix} 4 \\ 15 \end{bmatrix} = 1$$

$$\begin{bmatrix} 0 \quad 1 \quad 2 \quad 3 \\ 24 \quad 16 \quad 18 \quad 30 \end{bmatrix} \quad \begin{matrix} 4 \\ 15 \end{matrix} = 2$$

Idea: Repeat below approach for every element

delete an $ar[i]$ element, & calculate gcd of all remaining elements, & get overall max

$$TC: N * \underbrace{\{ [N-1] * \log_2 \text{max} \}}_{G \text{ TC to calculate gcd of } N-1 \text{ elements}} \approx O(N^2 \log_2 \text{max})$$

$$N >= 2$$

```
int deleteOne (int arr[], int n) {
```

`Pf.gcd[n] // Pf.gcd[i] = gcd of all elements [0 : i]` TODO

`sfgcd[n] // sfgcd[i] = gcd of all elements [i, n-1] TODD`

Edge Cases:

Delete arr[0]: gcd of all elements [1, n-1] = sfgcd[1]

$\text{Dcl}(c_0 \text{ ar } [n-1])$: gcd of all elements $[0, n-2] = \text{Pf}_2 \text{gcd } [n-2]$

$$\text{ans} = \max(\text{sgcd}[1], \text{pgcd}[n-1])$$

$i = 1 ; i < n - 1 ; i++ \}$

// delete arr[i] & get gcd of all remaining elements

$$\text{// } \text{arr}[N]: \left[\begin{matrix} a_0 & a_1 & a_2 & \dots & a_{i-1} \end{matrix} \right] \xrightarrow{\text{left}} \boxed{a_i} \xrightarrow{\text{right}} \left[\begin{matrix} a_{i+1} & a_{i+2} & \dots & a_{N-1} \end{matrix} \right]$$

left = gcd of all elements from [0, q-1]

`left = pf.gcd(i-1) // gcd of all [0, q-1], i=0 pf[-1] err`

right = gcd of all elements from [i+1, n-1]

$\text{right} = \text{sf}_{\text{gcd}}[P_f] // \text{gcd of all } \{P_{f+i}, N-1\}, i = n-1, P_f[n] \text{ err}$

`val = gcd(left, right) // gcd of all arr elements`

`ans = man(ans, val)` except $\text{arr}[i^{\text{th}}]$ element

return ans

$$\begin{aligned}
 \text{TC: } & N \log_2^{\text{man}} + N \log_q^{\text{man}} + N [\log_2^{\text{man}}] \\
 & \underbrace{Pf\text{gcd}[\cdot]}_{\downarrow} \quad \underbrace{Sf\text{gcd}[\cdot]}_{\downarrow} \quad \underbrace{i=1; i < n-1; i+1} \\
